

Clinics in Diagnostic Imaging

BJJ Abdullah, Department of Radiology, Faculty of Medicine, University of Malaya, 50603 Kuala Lumpur, Department of Diagnostic Radiology, University of Hong Kong.

Edited by Prof Wilfred C. G. Peh, Department of Diagnostic Radiology, University of Hong Kong.

Singapore: Miller Freeman Pte Ltd 1998, ISBN: 981-04-0133-7. 276 pages, U.S. \$14.95

The complexity of current medical practice with its technological advancements is at odds with the need for cost containment, minimisation of risk and the need for better outcomes. The need for consultation with radiologists in the selection of the most appropriate investigations would help in achieving this.

This book presents each topic in the form of a case quiz with relevant clinical history, laboratory data and some of the initial radiological images. This is followed by the findings, further radiological images as well as the pathological correlation. An in-depth review of the current literature is then presented. The cases have been chosen to cover the entire range of radiological modalities available. The cases chosen for discussion are

a good mix of common and rare entities which will allow the readers to get a better grasp of both the radiological features of these entities as well as providing an overview of the role of imaging in these condition. The cases selected were originally published in the "Clinics in Diagnostic Imaging" in the Singapore Medical Journal.

The problem-orientated approach of this book will be very useful for referring physicians to residents and even by the trainees. The quality of print is excellent with a wide selection of cases. A list of diagnosis, which allows easy reference to the cases, is provided. An index is also available. The size of the book is ideal for fitting into any white coat pocket.
