Sir

I read the recent publication on rapid test for Swine Flu with a great interest1. Zetti et al. concluded that “RIDT were able to detect S-OIV but the sensitivities were low1.” Indeed, this result is concordant with some recent reports2. The problem of using rapid test in the situation of pandemic Swine Flu urge for the further development on new diagnostic test for swine flu3. The solution might be the new point-of-care testing tool that is based on the real time PCR principle.
